FALGUN CENTRIFUGES

The falgun centrifuge pursues a business strategy aimed that to solves user problems. we have experienced in past 13 years what kind of issue our customers are facing, most off our customers are MEE or MVR plant holder, we deeply analyze there problem. Especially for MEE plants and MVR plants we developed filtration screen, with smallest possible size.

Now we have 30 and 50 micron screen Avabilities for pusher centrifuges. Plants that are facing a smaller particle bypass issue have benefits of using this screen; by using this screen they can collect more solid particles via centrifuge, and get more clear mother liquor, with lower bypass %, We get solid output with less than 5%* moisture, And we are glad to inform you that In so many cases we archived 0%* moisture in MEE plant products.

BOTTOM DISCHARGE CENTRIFUGE

MODELS :- 1) 24BD 2) 36BD 3) 48BD 4) 64BD

MECHANICAL PUSHER CENTRIFUGE

MODELS :- 1) MP210 2) MP250
